

PRAANA

PRE ANAMNESIS CHATBOT

Opening Hook:

"Imagine if every medical consultation could start with the doctor already knowing your complete medical history, current medications, and recent test results. Today, I'll show you how PRAANA is making this a reality in Brazil's healthcare system."

Key Points to Emphasize:

PRAANA stands for Pre-Anamnesis AI Assistant

We're transforming the most inefficient part of healthcare consultations

This is a problem every doctor and patient experiences daily

MEET THE TEAM

PROFESSIONAL MEDICAL AND AI DEVELOPMENT EXPERIENCE

MELISE ROCHA

LUCAS BARROS

ANASTASIIA BULATKINA

Slide 2: Meet the Team

Speaker Notes:

"Our team combines the perfect blend of medical expertise and technical innovation:"

Lucas Barros - The Medical Authority:

15 years as a practicing physician

Conducts 20+ telemedicine consultations daily

Experiences this problem firsthand every single day

Backend developer - bridges clinical needs with technical solutions

"I'm not just building a product, I'm solving my own daily frustration"

Melise Rocha - The AI Expert:

Biomedical engineer with 3+ years in AI development

Leading our chatbot development and natural language processing

Understands both healthcare workflows and AI capabilities

Ensuring our solution is clinically relevant and technically robust

Anastasiia Bulatkina - The Business Strategist:

Computer science background with business operations focus

Managing frontend development and user experience

Handling business development and market strategy

Ensuring our solution is both user-friendly and commercially viable

Team Advantage:

"We're not outsiders trying to fix healthcare - we ARE healthcare, enhanced by technology."

WHAT ARE WE DOING?

- PRE-ANAMNESIS CHATBOT
- COLLECT, ORGANIZE AND INTEGRATE CORE PATIENT INFORMATION
- SECURELY TRANSPARENTLY AND EFFICIENTLY

Slide 3: What Are We Doing?

The Vision Statement:

"PRAANA is an AI-powered pre-anamnesis chatbot that transforms patient intake through intelligent conversation."

Core Value Proposition:

COLLECT: Comprehensive medical history through natural conversation

ORGANIZE: Structure chaotic patient information into clinical-ready data

INTEGRATE: Seamlessly connect with existing EHR and telemedicine systems

Key Differentiators:

SECURELY: Full LGPD compliance and healthcare-grade security

TRANSPARENTLY: Patients understand exactly how their data is used

EFFICIENTLY: 5-10 minutes of doctor time saved per consultation

The Big Picture:

"We're not just saving time - we're enabling doctors to practice medicine instead of being data entry clerks."

BUT WHY?

01. TIME

Medical appointments are constrained by time - leaving little room for story taking.

02. MEMORY

Patients often struggle to recall critical information on the spot.

03. EXAMS?

Many arrive unprepared, without medical reports or exams.

There are significant gaps in efficiency, accuracy and preparedness- gaps that this solution is designed to close

Slide 4: But Why? - The Problem

Problem Validation - Paint the Picture:

"Every day, 500,000 Brazilian physicians lose 5-10 minutes per consultation waiting for patients to find basic information."

TIME Crisis:

Medical appointments limited to 10-20 minutes

Up to 50% wasted on information gathering

Doctors become frustrated, patients feel rushed

Actual medical care gets compressed into remaining time

MEMORY Challenge:

Patients forget medication names and dosages

Medical history becomes fragmented and incomplete

Critical information like allergies or family history overlooked

Stress of consultation makes recall even harder

EXAMS Nightmare:

40% of patients never send promised exam results

Forgotten passwords waste consultation time

Doctors make decisions with incomplete information

Follow-up appointments needed for basic data collection

The Scale:

"This affects 6,000 private clinics and 120+ telemedicine platforms daily. It's not just inconvenient - it's a systemic crisis affecting healthcare quality. And this problem came from a personal journey where our Physician Lucas Barros faced it Daily!"

TESTIMONIALS

Lidiane de Castro

"Patients almost never remember their passwords to access online exams. They always send it to me later!"

Marcelo Morato

"Waiting for patients to look at their medicines boxes or call relatives takes a lot of time from me to look at their chief complaint."

Dr. Lidiane de Castro - Telemedicine Specialist:

"This quote represents the universal experience of Brazilian physicians. Password management isn't a minor inconvenience - it's a daily barrier to effective healthcare delivery."

Dr. Marcelo Morato - Primary Care:

"Notice how he mentions the 'chief complaint' - that's the actual medical problem the patient came to solve. Currently, we spend most of our time on logistics instead of medicine."

Credibility Points:

These aren't isolated complaints - they're systemic issues
Both doctors immediately understood our solution's value
Representative of the broader medical community's frustration
Validates our problem-solution fit from actual practitioners

Market Validation:

"When practicing physicians immediately say 'this would revolutionize my practice,' we know we're solving a real problem."

INTERVIEWS Doctors

Willingness to Test

What do you want to see?

Slide 6: Interviews - Doctors

Research Methodology:

"We conducted structured interviews with 10 practicing physicians across different specialties to validate our assumptions."

Willingness to Test - 50% Ready:

50% said "Yes" - ready to test immediately

30% said "Maybe" - interested but cautious

20% said "No" - satisfied with current methods

Industry standard for new healthcare technology adoption: 10-15% early adopters

Our 50% readiness rate is exceptional and indicates strong market demand

Priority Information Ranking:

Medications (30%) - Critical for drug interactions and treatment planning

Recent Exam Results (26.7%) - Essential for diagnosis and monitoring

Chronic Diseases (16.7%) - Affects all treatment decisions

Family History (13.3%) - Important for genetic risk assessment

Allergies (10%) - Potentially life-saving information

Pregnancy History (3.3%) - Relevant for specific patient populations

Strategic Insight:

"This data shaped our conversation flow - we prioritize high-value information first, ensuring we

capture what doctors need most."

INTERVIEWS Patients

Do you prefer the chatbot over a form?

What do you prioritize?

Slide 7: Interviews - Patients

Patient Preference - 81.8% Prefer Chatbot:

"This is remarkable validation. Patients don't just tolerate our solution - they actively prefer it over traditional forms."

Why Patients Love It:

Conversational interface feels natural and supportive

Can take their time without feeling rushed

Guidance through complex medical terminology

Ability to pause and gather information as needed

No judgment for not remembering details immediately

Patient Priorities:

Fix Mistakes (57.1%) - Patients want control over their data accuracy

Talk to Someone (28.6%) - Human backup for complex situations

Data Protection (14.3%) - Privacy and security concerns

Business Impact:

"High patient satisfaction leads to better completion rates, more accurate data, and positive word-of-mouth marketing."

WHAT IS ALREADY HERE?

FEATURE	OUR CHATBOT	PATIENTINTAKE.AI	INFERMEDICA
Portuguese Language	✓ Native AI	✗ English only	⚠ Limited PT
Conversational Interface	✓ Full AI	✓ AI Chatbot	✓ AI Chatbot
Medical History	✓ Comprehensive	✓ Structured	⚠ Symptom
Brazilian Market	✓	✗ US-focused/Frontdesk	⚠ Global API
LGPD Compliance	✓	✗ HIPAA only	⚠ GDPR

Our Unique Position:

"We're the only solution specifically designed for pre-anamnesis collection in Portuguese for the Brazilian market. We are also the only ones doing it with easy language for patients"

Competitive Comparison:

PatientIntake.ai (Frontdesk):

Strengths: Established US market presence, proven AI capabilities

Fatal Weakness: English-only, designed for US healthcare system

Market Share in Brazil: 0%

Why We Win: Native Portuguese, Brazilian healthcare understanding

Infermedica:

Strengths: Global reach, advanced symptom checking

Weaknesses: Symptom-focused, not pre-consultation intake

Limited Portuguese support, not Brazil-specific and was built for Front Desk Users with Strong medical language.

Why We Win: Purpose-built for intake, not general triage

Key Differentiators:

- ✓ Native Portuguese AI - Understands Brazilian medical terminology
- ✓ Conversational Interface - Natural dialogue, not form-filling

- ✓ Comprehensive Medical History - All 13 essential fields
- ✓ Brazilian Market Focus - LGPD compliance, local healthcare workflows
- ✓ LGPD Compliance - Built for Brazilian privacy laws from day one

Competitive Moat:

"International competitors would need to rebuild their entire platform for Brazil. Local competitors lack our AI sophistication and medical expertise."

MARKET SIZE

01. TAM

US \$161B spent in 2024. [1]

02. SAM

Telemedicine: \$ 1.98B - 100 companies [2]

Healthcare clinics: 6000 [3]

Physicians: 500.000 [4]

SOM

< 5% in small cities

20-30% in big cities [6]

04. Timeline

Telemedicine expected CAGR (5 years): **19.3%** [5]

Slide 9: Market Size - TAM SAM SOM

Total Addressable Market (TAM) - \$161B:

"Brazil's total healthcare spending represents Latin America's largest market - larger than many European countries."

Serviceable Addressable Market (SAM) - \$1.98B:

Telemedicine market growing at 19.3% CAGR

100+ telemedicine companies active

Digital health adoption accelerating post-COVID

Government investing \$200M in healthcare digitalization

Serviceable Obtainable Market (SOM):

6,000 healthcare clinics (our primary target)

500,000 physicians (potential end users)

120+ telemedicine platforms (distribution channels)

Market Penetration Reality:

Small cities: <5% digital adoption (huge growth opportunity)

Large cities: 20-30% adoption (early adopter markets)

Our strategy: Start with digitally-ready urban markets, expand to smaller cities

Conservative Projections:

Year 1: 0.02% penetration = \$9,000 revenue

Year 2: 0.2% penetration = \$90,000 revenue

Year 3: 0.8% penetration = \$360,000 revenue

Even at <1% market share, we achieve substantial revenue

Growth Catalysts:

"Three forces accelerate our opportunity: aging population increasing demand, physician shortage driving efficiency needs, and regulatory support for telemedicine."

PRICING

TIER	PRICE	INCLUDING
Starter	\$50/month	100 patients
Professional	\$150/month	500 patients
Enterprise	\$300/month	Unlimited
Customization	\$10K-30K fee	

Based on the average price of \$3000 per month for EHR systems in Brazil.

\$4.8 million/year

Is it feasible for you to pay?

Slide 10: Pricing Strategy

Pricing Philosophy:

"We priced PRAANA at 5-10% of typical EHR system costs (\$3,000/month) while delivering immediate, measurable value."

Tier Structure:

Starter (\$50/month):

Target: Solo practitioners, small clinics

100 patients/month capacity

Basic integration and email support

Value Proposition: Time savings pay for subscription in 2-3 saved consultations

Professional (\$150/month):

Target: Growing clinics, telemedicine platforms

500 patients/month capacity

Priority support and API access

Value Proposition: Efficiency gains support clinic growth

Enterprise (\$300/month):

Target: Large clinics, hospital networks

Unlimited capacity

24/7 support and custom workflows

Value Proposition: Scalable solution for high-volume operations

Market Validation:

5 respondents said "Yes" to pricing (62.5%)

2 said "Maybe" (25%)

1 said "No" (12.5%)

87.5% find pricing acceptable - strong market validation

Revenue Projections:

Conservative average: \$150/month per customer

Break-even: 20 customers

Year 2 target: 50 customers = \$90,000 ARR

Year 3 target: 200 customers = \$360,000 ARR

ASSOCIATED COSTS Annually

AREA	SUBTOTAL
Infrastructure	\$18,588
Employee	\$682,500
Marketing	\$94,000
Consulting	\$20,000
TOTAL	\$815,088

Slide 11: Associated Costs

Annual Operating Costs: \$815,088

Infrastructure (\$18,588):

Cloud hosting, database management
Security and compliance tools
AI processing costs (variable with usage)
Email and communication services

Employee (\$682,500):

Expenses with developers, people to answer customer questions.

Marketing (\$94,000):

Digital marketing campaigns
Conference participation
Content creation and SEO
Partnership development

Consulting (\$20,000):

Legal compliance (LGPD)

Healthcare regulations
Business development advisory

HOW CAN WE REALLY JOIN THE MARKET?

AREA	MAJOR PLAYERS
EHR Systems (Our biggest Focus)	MEMED Iclinic
Public Healthcare System (SUS)	They have their own EHR

EHRs are our biggest focus for now because they are easier to integrate with it. Although not the biggest player in Brazil.

1. Memed - Brazil's Largest EHR Provider

Key Talking Points:

Market Position: Memed is the biggest EHR provider in Brazil with extensive market penetration

Partnership Infrastructure: They have a dedicated partnerships team specifically for healthcare integrations

Existing Partnership Model: Already partners with multiple Brazilian startups for:

Medical data summary generation

Medicine recommendations

Clinical decision support tools

Partnership URL: <https://memed.com.br/parceiro-software/>

Our Value Proposition to Memed:

"We enhance their existing patient summary functionalities with conversational AI"

"Their doctors get better data quality through our pre-consultation intake"

"We reduce their support burden by handling routine patient questions"

2. iClinic - Scheduling Integration Leader

Key Talking Points:

Core Strength: Established online appointment scheduling functionality

Integration Opportunity: We integrate our pre-consultation intake with their appointment confirmation system

Workflow Enhancement: When patients confirm appointments through iClinic, they automatically receive our intake questionnaire

Data Flow: Patient responses feed directly into iClinic's patient summary system

3. SUS

150 million patients served by SUS (70-84% of Brazil's population)

Existing digital infrastructure ready for enhancement, not replacement

Integration strategy with e-SUS APS (EHR) and Meu SUS Digital (patient app)
